

Hardware-Modification of the Miditemp Multistation - Series

To increase the output-level for the daughterboard-connector, (+6dB) please carefully solder a 1k Ω - resistor over R-202 and R-209. This **must** be done by a improved technician. For damages caused by handling-malpractices or rather damages caused by unqualified encroachment Miditemp is going to take no liabilities.
(Only for versions with a serial-number < # 300300099)
